

AvaTrace Software r5e

Mobile Network Operator List

Version E

Overview

This list contains mobile network operators for which AvaTrace, software version **r5e**, can select a default APN automatically.

In some countries mobile operators have multiple networks depending on region which may cause a certain operator to fail although it is listed below. Some operators also use multiple APN depending on the type of subscription used. An operator being listed below is not a guarantee that all their subscription types will function automatically with AvaTrace.
